

The Higham Lab at the University of California, Riverside is seeking a PhD student to work on the biomechanics of locomotion and feeding in three-spined stickleback. Research will be conducted at the Bamfield Marine Sciences Centre and at UC Riverside. The start date will be the Fall of 2019, and applications should be submitted by January 1, 2019. This is part of an NSF-funded research project that will examine the genetic architecture of biomechanical traits in this species across marine and freshwater populations.

Canadian students receive tuition waivers and full funding throughout their PhD. Please contact Tim Higham (thigham@ucr.edu) if you are interested or if you would like more information. Also, go to <http://www.biomechanics.ucr.edu> for general information about the Higham Lab. Information regarding the graduate program can be found at <http://www.eob.ucr.edu>.
